# CANTILEVER™ RACK SYSTEM

Creating the ideal storage rack system is easier with Prest Rack's highly innovative Cantilever system. It's exactly what you need to manage unbalanced loads of differing weights, sizes and shapes.

The Cantilever system thrives in the most rugged of environments – constructed of heavy roll-formed steel for maximum strength and durability. When it comes to surviving the daily rigors of lift trucks and material handling equipment, you'll find Prest Rack's Cantilever knows no equal.

In warehouses... in large retail environments... in discount club stores... in industrial storage areas... and any location where uneven loads can present a problem: Cantilever provides a strong, durable, accommodating solution for stacking and storage.

### Basic Elements

The Cantilever system is comprised of several basic elements, including single- and double-sided columns, diagonal bracing, channel arm load rails, beam ties, and 3" adjustable load arms. As you might imagine, the possibilities are virtually endless for creating precisely the storage system you need from a combination of these elements.

### A New Level Of Convenience

Cantilever presents a whole new level of ease and accessibility in stacking and storage. It offers the convenience of continuous shelves at different levels. A real boon for businesses and industries that deal with long and multi-length items. The system also features an innovative 2 x 6 "saddle" used between arms for added support when stacking large deck items such as furniture.

### Quick Assembly

Cantilever is quick and easy to assemble. You'll save time and installation costs and achieve a highly professional look which is sturdy, durable and convenient to use.

### Paint Finishes

Powder epoxy finish is electrostatically applied to assure 100% even coverage. The surface is impact and corrosion resistant, providing a tough but smooth finish. Choose from 10 high-gloss colors (see back page).

### 7-Day Express Shipping

Prest guarantees on-time delivery by a pre-established date, or Prest pays the freight!

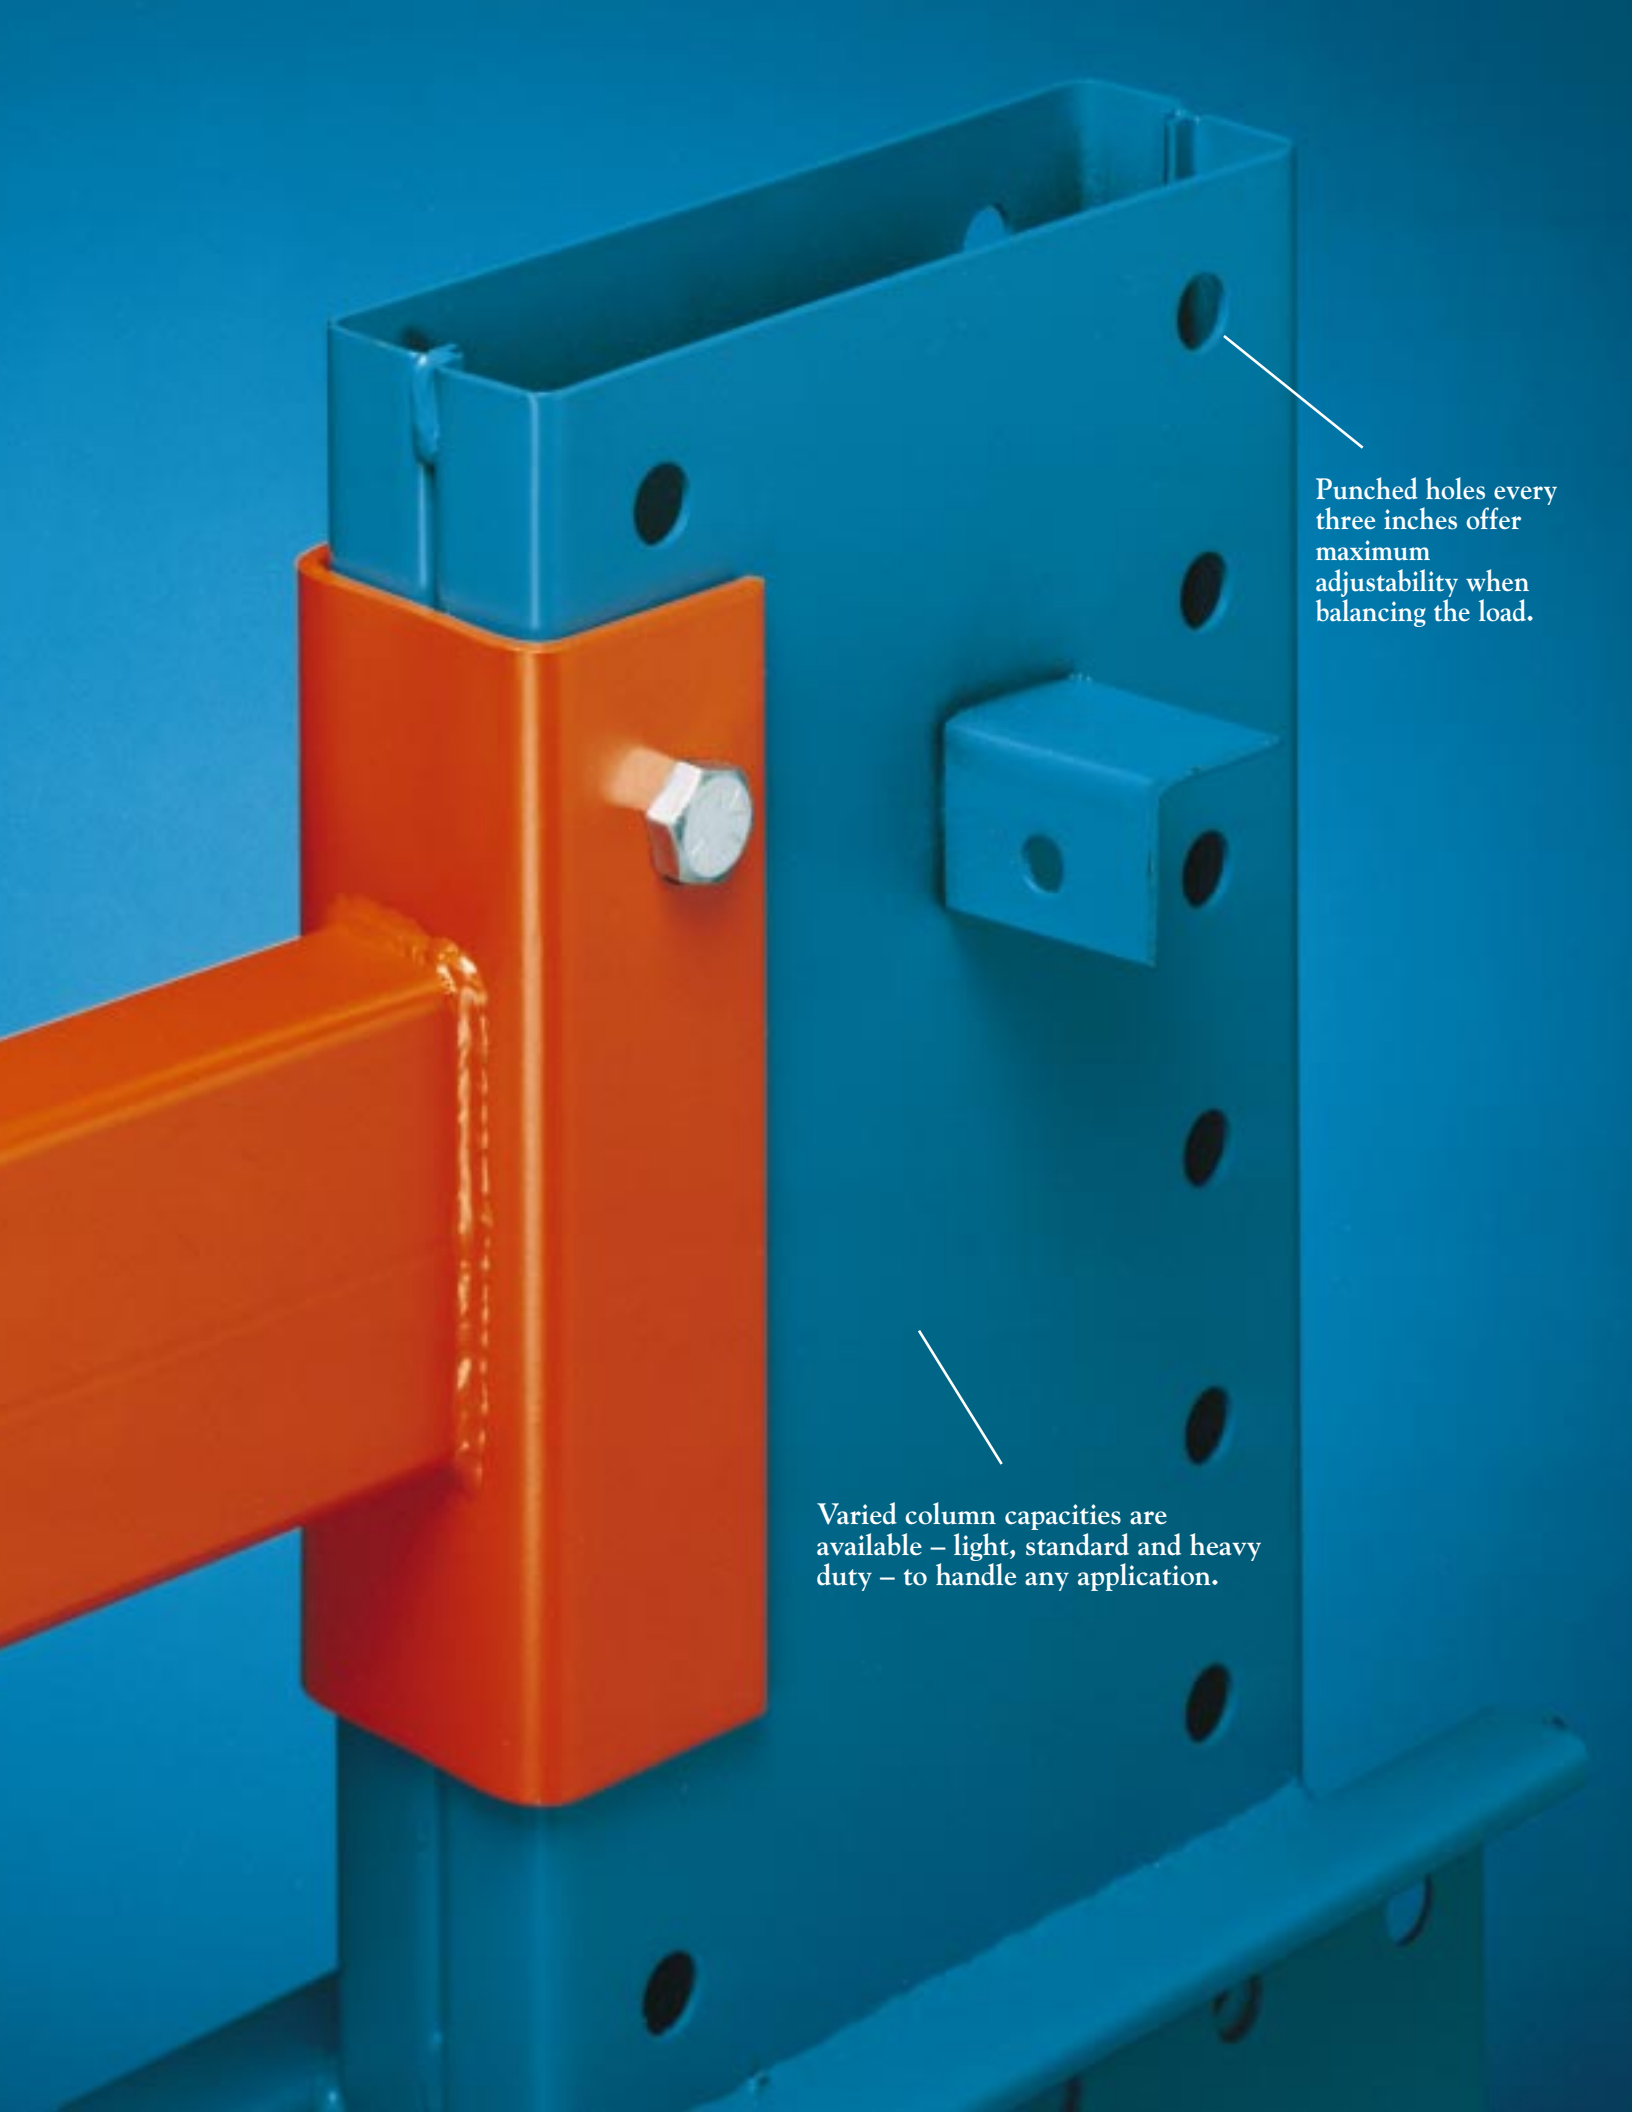

### Meet your Tough Storage Needs With A Customized Cantilever System

Prest Rack can custom design Cantilever arms to meet your toughest storage problems – angled arms, 2" x 6" saddles, additional steel supports or whatever to keep that special load in place.

Cantilever arms are structurally strong and are available in varied lengths and depths.

Punched holes every three inches offer maximum adjustability when balancing the load.

Varied column capacities are available – light, standard and heavy duty – to handle any application.
