

- Avoid Forklift Accidents
- Alert Workers & Pedestrians
- Warehouse, Yard and Office Applications
- Reduce Liabilities
- Increase Up Time

Let pedestrians and operators know if someone is just around the corner with our New **LOOK-OUT™**

Fall/Winter 2009

Alert Employees Of Dangerous Collisions **BEFORE** They Occur!

INTRODUCING LOOK OUT™

Our LOOK OUT™ product line offers a versatile line of safety sensors that will alert workers and pedestrians if a forklift or other moving object is approaching just around the corner. Our sensors are great for any traffic area and are quickly becoming a standard for warehouse traffic control.

Avoid accidents and potential liabilities to your facility. We have LOOK OUT™ products for just about every safety application for your warehouse, yard or office needs. And if you need a custom solution, we will work with you to assure that your safety needs are met to your complete satisfaction.

These sensors are quiet and yet easy to see, understand and respond to.

When our sensor detects movement in blind spots around a corner or a door way, it begins to flash a warning to the pedestrian or operator who is approaching that intersection. In addition, sensors will signal the blind spot as to movement from the other side. Thus, everyone approaching that intersection is informed of movement and will know to proceed with caution.

The sensors may be adjusted to specific angles and lengths that will meet the needs of your facility. Signals are sent via bright flashing red or amber LED lights on each visible

side of the units. These energy-efficient LED lights are highly reliable and will require no maintenance or replacement time.

Currently, we have 5 models of our new LOOK OUT™. Ranging from a two-way rack intersections, 3 and 4-way intersections, Dock intersections, Hall intersections, and Door entries.

Essential for Traffic Control.

Protect your employees, visitors and guests from dangerous collisions with forklifts or heavy equipment while walking through your facility. Safety and caution should be an automatic response to your implemented systems.

The LOOK OUT™ sensors provide such systems. They mount anywhere and are easy to see. They can help control your traffic concerns and communicate that someone is approaching from a spot that may not be otherwise visible. ■

Collision Awareness helps forklift operators navigate safely.

AVOID DEADLY & COSTLY FORKLIFT COLLISIONS

As workers juggle more projects and deadlines in a more timely manner, safety is jeopardized.

As this happens, so do accidents.

Each year, warehouse accidents kill close to 100 workers from forklift incidents. Forklifts also cause serious injuries to over 20,000 employees.

18 percent of all forklift accidents involve employees or pedestrians being hit by forklifts.

Lawsuits from cases involving forklift accidents are staggering and settlements often begin in the range of \$100,000.00 or more. Not to mention workers' compensation claims and productivity losses.

Collision Awareness is proud to offer the LOOK OUT™ product line of sensors and warning lights designed to avoid forklift accidents by alerting operators and pedestrians of approaching movement and potential dangers.

Their bright attention-grabbing color and graphics get noticed immediately. Plus, when traffic approaches, they relay a signal to begin flashing warnings to those approaching. The signal lights use energy-efficient LED lights that last 100,000 hours before they need to be replaced. They use a low-voltage 24v powersource and come with 25-50 ft. of wire for easy installation.

The Collision Awareness LOOK OUT™ series of products make it easy and affordable to avoid workplace accidents, costly litigation, and most-importantly, tragic fatalities. The LOOK OUT™ "Looks Out" for your business AND your employees! ■

LOOK OUT!

Alert operators and pedestrians of potential collisions in area blind spots with Collision Awareness **LOOK OUT**

& DOCK WATCH!

Blind spots, corners and dangerous intersections can cause serious accidents. Wouldn't it be great if someone was there to always alert you of on-coming traffic? As hard as safety supervisors try, they can't always be there to avoid collisions.

However, our **LOOK OUT™** sensor alert unit is where you need it; every hour of every day. It "looks out" and scans traffic areas and blind spots. Once it senses motion, it relays a signal to the energy-efficient LED flashing lights that triggers a warning for others to see. It literally LOOKS OUT for everyone's safety.

It's highly visible but remains silent so not to distract other operators or pedestrians who may be in the area.

The **LOOK OUT™** is available in a variety of versatile models that will make your facility safer to work and maneuver in. It will alert on-coming traffic of blind spots and dangerous intersections.

This diagram shows where the **LOOK OUT™** can be positioned for optimal protection.

LOOK OUT™ 1

The **LOOK OUT 1** is ideal for end of rack aisles that may or may not have end of aisle obstructions, blocking the view within the intersection.

Easy to adjust sensors will activate the highly visible LED warning lights that blink on each side of the unit to warn approaching traffic that there is a moving object just around the corner.

LOOK OUT™ 2

The **LOOK OUT 2** is similar to the **LOOK OUT 1** with the exception that it is a larger unit and has two LED warning lights on each side of the unit making it more visible to see and respond to.

LOOK OUT™ 3

The **LOOK OUT 3** is great for a 3-way intersection next to or including pedestrian hallways. This unit hangs from the ceiling above and is centered in the intersection for optimal recognition.

LOOK OUT™ 4

The **LOOK OUT 4** is great for a 4-way intersection. It helps regulate traffic in a voluntary fashion warning of approaching movement of other pedestrians or machinery.

DOCK WATCH™ 1

Perfect for one door applications. Senses motion in trailer and warns operators and pedestrians of impending danger.

DOCK WATCH™ 2

DOCK WATCH 2 works the same as **DOCK WATCH 1** but can be used to protect two dock doors. Sensors can point to both door locations, plus identify motion in traffic areas near the loading dock.

We also offer the **HALL MONITOR™** and the **DOOR MONITOR™** which mount easily on drywall and can be used for warehouse and office applications.

If you have a custom need for one of these applications, call us and we will work with you to produce a solution that will meet your application to your complete satisfaction.

Collision Awareness is dedicated to warehouse safety and has been developing safeguard systems since 2003. Please call to speak with an associate and arrange a FREE consultation of how the **LOOK OUT™** can help you avoid costly situations that can seriously jeopardize your business operations.
